❚❚ PAUSEAI

WE RISK LOSING CONTROL

The experts are warning us: AI could erode our democracy, create powerful viruses, and even cause human extinction.

WE NEED A PAUSE

Stop the development of AI systems more powerful than GPT-4. This needs to happen on an international level.

WE NEED TO ACT RIGHT NOW

In 2020, experts thought we had more than 35 years until AI could pass the SATs. It took just three. Superhuman AI might be months away.

YOU CAN HELP

Too few people are aware of the dangers of AI. Get informed, inform others and help slow this train down.

WE NEED TO PAUSE AI

We are concerned volunteers who believe AI presents very serious risks.

Humanity has never encountered something more intelligent than itself. This could change soon. The latest AI models have a verbal IQ of 155, can translate over 26 languages, can write graduate level software, and produce images that win photography competitions. We are rapidly approaching a point where AI outsmarts even the most intelligent humans.

Such a superhuman AI could be used to manipulate elections, hack all devices on earth, or design new viral bioweapons. No one should have this power. And to make things even worse: we still don't know if it's even possible to control such an intelligence. The AI alignment problem has not been solved.

AI scientists on average believe there's a 14% chance that superintelligent AI will 'lead to very bad outcomes (e.g. human extinction)'. AI safety researchers give this 30%. Would you enter a plane if the engineers think there's a 14% chance that it crashes?

AI companies are stuck in a race to the bottom. As record-level investments are poring in, these companies are pressured to prioritize capability progress over safety.

We need governments to step in and implement a Pause. We need to stop the development of the largest AI models. We need your help to convince them. Learn about AI risks, spread the message and write to your representatives.
